My Roadmap

MY WEBSITE

I first started with creating my portfolio using wireframe, in order to have a clue on how my website will look like.

Secondly i started to do a rough draft on Visual studio to see if i can actually do it

I started to make changes in my wireframe.

When I was happy with the results I started with my actual website.

I started with my actual website on Visual studio whereby I made my Home page and About page

Started with my firebase on my Contact form and also got to know that I had to add a reChaptcha which was a bit hard to do
